

World Steel Association awards Climate Action Certificate to SAIL

Steel Authority of India Limited (SAIL) has won Worldsteel Association's prestigious 'Climate Action' certificate. The certificate recognises SAIL's untiring efforts towards saving the environment and preserving natural resources, and specifically acknowledges that SAIL has supported CO2 data collection in excess of 90% of its crude steel production. This data has been reviewed internally by Worldsteel staff, verified independently by a steel industry expert team and, as a final step, approved by SAIL.

This data collection is the first important step in managing emissions. It allows the establishment of a baseline for the production routes in steel industry and enables organisations to measure themselves against this and create an improvement programme for the future. The certificate, valid for a period of two years, once again reasserts SAIL's position as an industry leader that takes proactive steps to manage emissions.
